

Wizard Screens

80mm / 100mm Integrated Horizon Frame
3 Sided Frame - Double

1. Read fully before beginning
2. Components are cut to size and predrilled for convenience
3. Installation typically requires two people

! Call 604-299-4426, or email support@wizardscreens.com
prior to starting if you have any questions

*This will save you steps (if you are installing the screen right away you don't need to install the mill finish jamb fillers)

Tools

1. Power Drill / Driver
2. Level
3. Shims
4. Ladder

Components List for 3-sided frame - **DOUBLES**

1. Header **x2**
2. Jamb **x2**
3. Jamb Block **x2** (jamb block located inside jamb)
4. Jamb Filler **x2 mill**
5. End plates **x2**
6. Screw pack

You do not require the Housing Alignments jig or locator pins

3 - #6 x 3/4" self-tapping screws provided for each side
Do this for both left and right

! Make sure jamb block is flush top and bottom once screw is installed.

Position the header onto the jamb extrusion

! Ensure that you matched the profiles as illustrated before fastening

2 - #6 x 1 1/2" self tapping screws provided for each side

Connect both top corners before moving to next step

Note: Double **will have 2 headers**. Do each top corner separately before mounting into rough opening - there will be a butt joint once installed into the rough opening.

! Make sure corner is even/90 degrees and there are no gaps (>1/16") in the connection points

#6 x 1/2" self tapping screws provided for each side

Place the aluminum headers between the 2 jambs

Attach from the **top** through the 2 holes in each end plate

Connect both top corners before moving to next step

Pre check rough opening for plumb, level and square.

When frame goes into rough opening it needs to be squared off, shimmed, and screwed into the rough opening so it is plumb, level and square - pay special attention to bottom surface.

! If you have a “hump” or “dip” in the middle then you will need to possibly shim the frame up (for hump) on the sides so the bottom of the frame is level with the highest point in the floor wherever that might be, if you had a dip then when the screen unit goes in the tracks will need shimming so they are level.

The same goes for sides and top.

- 1) Lift frame into opening. If installed inside the house, “front” faces to the interior and the back to the exterior.
- 2) Drill on **guide lines** and screw frame into rough opening using #8 x 2” self tapping screws or equivalent depending on the mounting surface - **Install 2 screws every 12” - 16” down the jamb**
- 3) Once complete, re-check install for plumb, level and square, make sure there are no bows or bends in the aluminum
- 4) Repeat on opposite side

Upper header: Fasten along the guide lines 4" from the jamb and then approx. every 12" - 18"

For double door a butt joint might be required in the rough opening. Install one side of the frame temporarily and get the other side into position, once into position you can begin line up both sides and make any adjustments. Make sure you have at least 4 screws installed within 1" of the butt joint to ensure its strong.

Install jamb inserts - note orientation. These help hold the integrity of the frame while construction continues - these are removed once the installation of the screen begins

It is recommended that the screen be installed as late as possible in the construction phase to avoid any damage.

Push the jamb insert all the way down tight to the floor

Installing the Screen

Carefully remove jamb inserts

Install header inserts (there are 2)
*note position of track channel to
line up with the pull-bar

**! Note Orientation with header
inserts and will look as below
(installed in next steps)**

Install housings

Position of header
insert / pull-bar

Release brakes using supplied **RED** wedge

Slide the 2 lower track mounts under pull-bar tight against housing endcap. Use supplied track cut-off to ensure the track is square housing and fasten down REPEAT ON OPPOSITE SIDE

Lower Track Mounts (2): Drill and Counter sink lower track mount with 1" Robertson (square) flathead screws every 12" - 18"

Use supplied cut-off to align both track mounts

Make sure the track mounts are over and tight to the housing

Upper and lower track runners

Counter-sink the black track runner

Upper and lower track runners

Trim the top edge only
at 45°

Lower track runner

Pull it out approx. 8"

Upper and lower track runners

Check track runner is clear
of debris

Lift pull bar, gently slide track runner onto the zipper teeth, tight to nipple on each endcap – see highlight in last panel below

Remove the track cut-off

Do this on both sides

Feed lower track onto pull bar

Track tight to housing

Interlock track and track mount

Insert spline

You will have a gap in the middle

Tilt upper tracks into the header and release them

Feed the **extended track runner** onto top zipper, ensuring it's tight to housing

Release the track to let it sit in the track channel

You will have a gap in the middle

Tracks Latches

The upper and lower track latches now fit into place, you might need to trim the track runner for a tight fit, fasten in place with the screws.
